EXPERIENCE

Total Assisted Living

Web Developer and Staff Member | September 2018 - Present

- Built a responsive website using HTML, CSS, and Javascript. Maintain the website. Used CSS flexbox to align all of the elements. focused on each UI component to make it user-friendly.
- Supervise the facility; making sure that the residents are doing well. Prepare meals, wash dishes and distribute medication.

360 Marketing - FXBG Hometown Internship

Graphic Designer | January 2021 - August 2021

- Created engaging social media event posts using Adobe Photoshop and Canva. Then managed the posts through Facebook and Instagram.
- Attended weekly team meetings, shared thoughts on what we can implement and improve on in order to create engaging posts and have positive feedback.

Ana's Helping Hands

Freelance Visual Designer | June 2020 - March 2021

- Designed the brand identity for the company.
- Helped design and custom social media advertisements.
- Branching out new ideas.

PROJECTS

Memo (chat app) made in React

This application uses chat engine API in order to send and receive messages. It uses the 'send message' component which allows the user to send a message and 'is typing' component to indicate that the recipient is typing.

Weather App

In this app you can search the weather for any place in the world in Fahrenheit. This app is written in HTML, CSS and Javascript. It uses weather API to retrieve weather data. I added a random pictures url so that when the user types a location; an image related to the area shows up.
